Submission Deadlines

**July 10, 2019**: Master Clinician Sessions
- Acceptance Notifications: August, 2019

**September 5, 2019**: Symposia, Workshops, Roundtables
- Acceptance Notifications: October, 2019

**October 1, 2019**: Career Development Leadership Program, Donald F. Klein Award, and CDLP Mentor Applications
- Acceptance Notifications: November, 2019

**October 30, 2019**: New Research Posters
- Acceptance Notifications: December, 2019

#ADAA2020 Submission Site Now Open!

[Click Here to Submit]
Portal Information for Submitters

- Credentials for login to submission site will be sent to members that were 2019 presenters in May. This is a member benefit. If you were a presenter but NOT a member, you will need to create a new log in.

- Review and update your contact information at login.

- Submissions can be saved to complete at any time before the appropriate deadline (refer to slide 3 of the PowerPoint).

- Communication for the 2020 conference is exclusively by email; please add @attendeeinteractive.com to your safe-sender list.

Questions? Email conference@adaa.org

For more information about the 2020 ADAA Conference visit:
https://adaa.org/conference/2020-San-Antonio
Things To Know Before You Submit

- All session and poster presenters must register at the appropriate registration fee to attend the conference. Session chairs/organizers are responsible for making sure that all presenters agree to this requirement. ADAA is unable to provide a discount for presenters.

- Sessions will be scheduled on Friday, Saturday, or Sunday (with the exception of Master Clinicians). By submitting, you agree to present on any of those days. ADAA is unable to take scheduling requests.

- Submissions can be saved to complete at any time before the appropriate deadline.

- Presenters may submit up to four presentations, but only two may be accepted. (Excludes chairs, discussants and poster presentations.)

- Session submitters/chairs are responsible for ensuring the submission is completed by the deadline (specifically symposia with individual titles/abstracts that need to be uploaded by the individual presenters before the deadline).

- Begin the submission process early to allow time to edit/add information. Save your submission and log back in to finalize by the deadline. Avoid waiting until the final days – if you have any questions or need assistance last minute, the conference team may have a delayed response due to high volume of emails coming in at that time.

- All session descriptions and individual symposium abstracts are peer-reviewed for scientific and educational merit. Be sure to provide enough content for reviewers to evaluate your submission.

- Be clear about results, educational need, and contribution to advance science or practice. DO NOT write, “...has been presented before with good reviews” or “results will be discussed.”
Things to Know Before You Submit

- You must complete your disclosure and submit your CV (or a short bio) or your session may not be eligible for CE/CME Credit.
- Write learning objectives using action verbs (see slide 17).
- DO NOT enter test or multiple submissions for the same presentation. You can log in more than once up to the deadline to complete an abstract.
- Abstracts should not include charts, graphs, or references.
- Do not include a department name in the author/presenter affiliation.
- You must designate the level of the presentation: Read guidelines on slide 7.
- Be sure to read “Review Criteria” on slide 16.
- Submission site closes at 11:59 pm (ET) on the stated deadline. Incomplete or Late Submission = Rejected

In line with the theme of #ADAA2020: Resilience: From Research to Practice, ADAA also encourages submissions focused on psychological resilience across the lifespan. Examples include:

- Preventive interventions aimed at enhancing resilience in high-risk populations (e.g., children growing up in poverty, urban youth, first responders, military)
- Clinical trials focused on enhancing resilience in individuals with anxiety and/or depression
- Neuroimaging studies of resilience to stress and/or trauma
- Research in animal models of resilience
- Novel resilience-focused programs (e.g., clinical, family or community-based, school- or college-based programs; programs for the elderly)
Designating the Level of your Presentation
You must designate the level of the presentation. Read guidelines below:

**Introductory:** Sessions for those who have not had training in the topic; appropriate for those in training and those interested in learning new skills. They can feature general overviews of conditions and research studies that do not require in-depth knowledge of the topic, as well as introductions to treatment planning and strategies.

- Examples: “Introduction to Exposure Therapy for OCD,” “Pharmacotherapy for Treatment-Resistant Depression,” and “Use of Complementary and Alternative Medicine.”

**Intermediate:** Sessions requiring a moderate understanding of a condition, experience with treatment strategies, or knowledge of related topics, including research studies. They provide little background information and focus on specific principles. Abstracts should include up to three concepts familiar to attendees, such as exposure and response prevention, reassurance seeking, or hierarchy.

- Examples: “Incorporation of Specific Protocols to Treat Reassurance Seeking Behavior in OCD,” and “Enhancing Engagement in Exposure-Based Treatment for PTSD.”

**Advanced:** Sessions requiring an advanced understanding of a condition, experience with treatment strategies, or knowledge of related topics, including research studies. They provide no background information and focus on specific and advanced principles. Abstracts should include up to three concepts familiar to attendees, such as exposure and response prevention, reassurance seeking, or hierarchy.

- Examples: “Solving Problems in the Therapeutic Relationship,” “What Works and How: Primary Outcomes and Mechanisms of PTSD Treatment in Veterans from the PROGRESS Trial”
Master Clinician Sessions

Deadline: July 10, 2019

- Interactive, experiential, in-depth training, and skills acquisition
- Target experienced clinicians (MD, MFT, MSW, PhD, PsyD, etc.)
- 120 minutes
- Submit title, 350-word (2500 characters maximum) abstract, three learning objectives, plus a detailed outline describing need, format, and past experience offering this program.
- For intermediate and advanced sessions, describe what attendees should know to make the most of the session.
Sample Outline: Master Clinician

- **Audience level:** Advanced; expect participants to be familiar with *DSM-5* criteria for disorder and have experience treating patients with comorbid anxiety and mood disorders.

- **Format:** Lecture, interactive role-playing, and discussion. Use video clips to demonstrate techniques with different patients.

- **Overview:**
  - Survey participants for their “burning questions.” (15 min.)
  - Give overview of theoretical framework and research. (15 min.)
  - Show techniques taught using video clips of cases that clearly demonstrate how to implement this psychotherapeutic approach. (30 min)
  - Role-play using case examples generated by audience, or bring cases to discuss. (30 min)
  - Follow-up discussion about barriers to implementation and answer questions. (20 min.)
  - Wrap up with how to learn more. (10 min.)
  - State past experience, such as: “I have offered versions of this session at national meetings for the XYZ Association, Society of ABC, and regional meetings in the Southwest over the past five years. I am board certified in sleep and behavioral medicine.”
Symposia

Deadline: September 5, 2019

- Group presentation organized around a specific theme
- Up to 4 presenters, plus chair/co-chair and one optional discussant
- 60 or 90 minutes
- Submit session title, abstract (2500 characters maximum), three learning objectives
- Submitter adds session details, plus searches for individual presenter, chair and discussant info in the ADAA submission database (many presenters already have records and contact info. If not already in the ADAA system, submitter will have the option to “add new presenter” so should have presenter contact info, degree, and email if necessary.)
- Each presenter will receive an automated email with individual submission login credentials in order to add their presentation title and 2500-character abstract. Do NOT include presenter names in any abstract, including the overall session abstract.
- Session submitter is responsible for ensuring all presentations are added and disclosures are completed for finalizing overall submission.
Ignite Symposia

What Is This?

• These presentations are designed to “ignite” the audience about a subject and generate awareness, thought, and action. Speakers present research or cases around a theme, e.g. treatments for children or attention bias.

• Each speaker is allocated 5 minutes and 20 presentation slides. Each slide is displayed for 15 seconds before being automatically advanced.

• Speakers include significant time for discussion.

Deadline: September 5, 2019

• Group presentation organized around a specific theme

• 60 or 90 minutes

• Up to 10 presenters, plus chair

• Submit session title, 2500-character abstract, three learning objectives, plus a 2500-character abstract with unique title for each presenter except discussant. Do NOT include presenter names in any abstract.

• Submitter adds session details, plus individual presenter, chair and discussant info by searching ADAA submission database. (Option to “add new presenter” with contact info, degree, email.)

• Each individual presenter will receive an automated e-mail with their submission login credentials in order to add their presentation title and 2500-character abstract. DO NOT include presenter names in any abstract, including the overall session abstract.

• Session submitter is responsible for ensuring all presentations are added and disclosures are completed for finalizing overall submission.
Sample Abstract: Symposia

Sample Session Abstract: The current symposium will be the first presentation of the primary outcomes and mechanisms results from the largest (N = 223) PTSD treatment and integrated mechanisms trial conducted to date: The PROlonGed ExpoSure and Sertraline Trial (PROGrESS). This randomized controlled trial (RCT) focused on a key question in clinical management of posttraumatic stress disorder (PTSD) - the comparative and combined effectiveness of medication and psychotherapy. Increased emphasis on mechanisms of treatment effectiveness, biomarker predictors, and objective indicators of treatment response has sparked interest in integrated, translational treatment outcomes trials. PROGrESS employed a state of the art trial design to examine psychotherapy and medication effects across three conditions: 1) Prolonged Exposure (PE) plus pill placebo, 2) Sertraline (SERT) plus Enhanced Medication Management (EMM), and 3) Combined treatment (PE/SERT). Innovative measures captured potential biomarker predictors and indicators of treatment response within and across these three treatment conditions in Operation Enduring Freedom/Operation Iraqi Freedom/Operation New Dawn (OEF/OIF/OND) service members and veterans with PTSD. Assessments included clinician-rated measures, self-report outcome measures, saliva for salivary cortisol and cortisol response to awakening at six assessment points, blood at baseline and week 24 for genetic and genomic analysis, as well as resting state connectivity and emotion processing and regulation using functional Magnetic Resonance Imaging (fMRI) paradigms in a subsample of veterans. Accordingly, the results provide pragmatic clinical direction for the delivery of PTSD treatment through its primary outcomes in an effectiveness design, and informative results to elucidate underlying mechanisms and biomarkers involved in PTSD treatment response.

Sample Individual Abstract: Background: Resting-state functional connectivity (rsFC) magnetic resonance imaging (MRI) represents a powerful method for illuminating brain network function. Moreover, abnormalities in rsFC have been recently demonstrated in posttraumatic stress disorder (PTSD), suggesting they may have particular relevance for this condition. The current study examined pre to post treatment changes in rsFC in PTSD during the randomized treatment trial (PROGrESS; Rauch et al., 2018). Methods: Sixty-four combat veterans with PTSD were randomly assigned to three treatment groups: Prolonged Exposure plus placebo (PE +PLB), sertraline plus enhanced medication management (SERT + EMM), or PE+SERT. Twenty-nine combat veterans without PTSD were recruited as a control group. Symptom assessment and resting-state MRI scanning occurred before and after treatment. Seed-based and connectome-based approaches were used to analyze rsFC. Results: Before treatment, PTSD was associated with less connectivity between PCC, vmPFC and other default-mode network (DMN) regions (both p<.050; FWE corrected), replicating prior findings of decreased within-DMN connectivity in PTSD. PCC and vmPFC, as well as the insula (salience-network (SN) seed), had greater connectivity with regions within the dorsal attention network (DAN) in patients, which is in line with the cross-network desegregation in PTSD (all p<.050; FWE corrected). Patients who had more than a 50% decrease in PTSD symptoms with treatment (i.e., “responders”) had lower pre-treatment amygdala-PCC connectivity (p=.011), suggesting the pivotal role of SN-DMN segregation in PTSD treatment. In addition, these patients had lower global centrality (p=.042), suggesting that topological features of the brain may also be related to PTSD treatment response. Conclusions: These findings replicate and extend our knowledge of network-level abnormalities in PTSD, and importantly, suggest potential neural biomarkers of PTSD treatment response. (*Rauch, S.A.M. and Liberzon, I. contributed equally to this work.)
Workshops

Deadline: September 5, 2019

- Interactive, experiential training, skills acquisition, and discussion of treatments through case presentations
- 60 or 90 minutes
- Up to 4 presenters
- Submit a title, 350-word (2500 characters maximum) abstract, three learning objectives, plus a detailed outline describing need, format, relevance including use of video, role playing, discussion of cases and audience participation

Sample Workshop Abstract

Some individuals do not sufficiently benefit from the evidence-based treatments currently available for anxiety disorders. One factor associated with poor treatment outcome is the presence of treatment-interfering behavior (TIB). This workshop will describe Treatment-Readiness Therapy (TRT), an approach to the modification of TIB. TRT is an integrative, modular approach that draws from a variety of research and sources, including cognitive and behavioral models and motivational interviewing principles, to address the various factors that influence TIB. This workshop will apply the principle components of TRT in the presentation of case vignettes. These vignettes will illustrate how to formulate a case. Additional case examples for adults will demonstrate how to design interventions. TRT can be applied in different practice settings and by a range of providers treating individuals with behavioral and pharmacological treatment, or a combination. Attendees are encouraged to bring examples from their practice to discuss. This workshop is for experienced clinicians from all disciplines. Students, trainees and residents are welcome and encouraged to attend to learn about cases in real-world settings.
Sample Outline: Workshops

- **Format:** Lecture, presentation of case vignettes to illustrate how to formulate a case.

- **Overview of Workshop:**
  - Introduce yourself.
  - Meet participants to understand level of familiarity and “burning questions.” (15 min.)
  - Give overview of theoretical framework and research. (10 min.)
  - Show techniques taught using cases that clearly demonstrate how to implement this approach in different practice settings. (35 min.)
  - Follow-up discussion about barriers to implementation and answer questions. (25 min.)
  - Wrap up with how to learn more. (5 min.)

- **State past experience, such as:** “I have presented versions of this workshop at national meetings for the XYZ Association, Society of ABC, and regional meetings in the Southwest over the past five years. I am certified in CBT.”
Roundtables

Deadline: September 5, 2019

- Interactive discussion on a focused topic, case presentations, issue, or question in practice or research

- Submit title, 2500-character maximum abstract, *including specialty area of panelists but NOT names, target audience*, and three learning objectives.

- 60 minutes

- Minimum 3; Maximum 6 panelists plus chair

Sample Roundtable Abstract

Technology-augmented interventions address many of the challenges, including availability, accessibility, and efficacy of CBT for anxiety disorders. Given recent advances in the availability and affordability of smart and mobile devices and tablet technologies, we’re seeing a paradigm shift in the delivery of evidence-based treatments. This trend will increase accessibility to clinically effective and cost-efficient care with experientially driven, user-friendly technology products combining interactive media and best practices. These technologies have the potential to dramatically change the climate for early outreach, dissemination, and implementation of EBTs targeted to needs of clinicians, patients, and their families. Four panelists will discuss research and clinical projects that target the development, evaluation, and dissemination of technology-enhanced clinical tools. Projects reviewed will include educational, assessment, and treatments solutions targeting PTSD, social anxiety disorder, and pediatric spectrum anxiety as a whole. The panelists will share successes and challenges related to their respective technologies, including live demonstration of project features. Given the panelists’ unique expertise and access to a variety of enabling technologies, they will discuss how these technologies (e.g., webcams, online videos, virtual reality) can be incorporated in the delivery of interventions for the novice or seasoned clinician. Audience members will be encouraged to ask questions, share their experiences with technology, and witness or interact firsthand with the panelists’ technologies during the presentations.
Review Criteria for Symposia, Workshops, Roundtables

Highly-Ranked Presentations:

- Present innovative or novel approaches, techniques, or treatments.
- Include researchers and clinicians on symposia and roundtables.
- Address an important, highly relevant, or hot topic.
- Include a topic that is a good fit with conference theme.
- Provide high-value opportunities for learning and networking.
- Present new data (for research sessions).
- Address challenges or obstacles that arise when implementing treatments (for practice sessions).

Criteria:

- Clearly written abstract and learning objectives.
- Clearly described outcomes.
- Description of why new skills, techniques, or approaches are important (for workshops).
- Results must be included for symposia abstracts

Important Notes:

- We encourage interactive presentations comprised of both clinicians and researchers and also speakers from different institutions.
- We encourage submissions related to the 2020 Theme – Resilience: From Research to Practice
- We encourage submissions on diversity and related to cultural, racial and socioeconomic barriers to mental health care
- New first-time presentations will be given priority
- If a presentation has been made previously at ADAA, presenter needs to provide a rationale for why it should be repeated.
Learning Objectives

**Examples**

- **Focus on the attendee** and describe what he or she will learn, know, or be able to do as a result of your session.

- **Use action verbs that describe measurable behaviors:** analyze, apply, assess, create, compare, demonstrate, describe, discuss, explain, plan, practice, predict, recognize, summarize, use, etc.

- **Do not use these words:** learn, know, understand, appreciate.

- **Do not write** “participants will learn how to treat anxiety” or “participants will understand how to motivate patients to exposure therapy.”

At the end of this session, participants will be able to...

- **Recognize** differences between acute and traumatic stress.

- **Apply** novel pharmacotherapies when treating patients with comorbid anxiety and depression.

- **Practice** relaxation and breathing techniques.

- **Summarize** genetic advances in our understanding of related disorders.
New Research Posters

Deadline: October 30, 2019

• Individual presentation in a poster format shares new research findings.

• Abstracts must include a title and 2500-character abstract; no learning objectives.

• Posters based on original studies that lack meaningful data (include N) will be rejected.

• Presenters must attend poster session.

• Presenters of accepted posters must register and pay the fee by the early rate deadline or their poster will be removed from the program.

• Poster presenters must upload PDF for e-Poster site if accepted.
**Sample Abstract: Posters**  (slide 1 of 2)

**Background:** Despite being at disproportionately higher risk for trauma exposure and trauma-related psychological problems such as alcohol or substance abuse, the majority of low-income African Americans do not develop alcohol or substance use disorders. According to the “Broaden and Build Model,” individual factors, such as the presence of optimism or positive emotional traits such as joy and contentment, may explain this resiliency (Fredrickson, 2004). However, research in this area needs to be expanded to account for the impact of cultural and familial factors such as types of social support provided (family and/or community) and parental substance abuse history.

**Methods:** As part of a larger NIMH-funded study, we gathered data from 991 African American adults, ages 18 to 65, recruited from an urban public hospital. We assessed substance abuse, trauma exposure, and social and emotional support via the following self-report measures: the Traumatic Events Inventory (TEI), which was used to assess lifetime trauma exposure; the Clinical Data Form (CDF), which assesses support an individual receives from their parents or guardians as a child; the Child Community Support Questionnaire (CCSQ), which assesses support an individual receives as a child from adult outside of their parents or guardians; and the lifetime Alcohol Use Disorders Identification Test (AUDIT), which assesses problematic alcohol use patterns.

*Continued on next slide*> > >
Results: A hierarchical regression indicated that, after controlling for age and trauma exposure, community support (CCSQ adult support: $\beta=-.06$), family stability (CDF family: $\beta=.2$), and parental alcohol/substance abuse (CDF parent drug/alcohol use: $\beta=.13$) significantly predicted problematic drinking behaviors in the lifetime (AUDIT lifetime total score; $R^2 = .21$, $p<.001$).

Conclusion: Findings extend prior research on the “Broaden and Build Model” regarding the protective effects of social and emotional support; these data may help increase our present understanding of resilience in high-risk, low-income African American adults. Findings underscore the role of social support, family stability, and parental alcohol/substance abuse on problematic alcohol use in this population. These data have implications for the development of culturally competent models of prevention and treatment of alcohol and substance abuse.

• Presents preliminary analyses using a sample size sufficient to generate statistically significant, meaningful, and generalizable findings.

• Presents new techniques/ideas.

• Addresses an important, highly relevant or hot topic.

• Advances research, treatment, or understanding of anxiety, mood and/or related disorders.

• Demonstrates high scientific and intellectual quality.
ADAA 2020 Award Program
Alies Muskin Career Development Leadership Program

Award Components
• Complimentary registration to the 2020 Anxiety and Depression Conference (a $600 value)
• A full day of small-group mentoring sessions
• Assignment of a senior mentor from the ADAA professional membership at the conference
• Recognition at the conference Opening Session
• Basic Neuroscience and Clinical Research Tracks: Presentation of a poster at one of the New Research Poster sessions at the conference is mandatory.
• Clinical Track: Case consultation session with a senior clinician from the ADAA membership
• Featured profile on the ADAA website
• ABCT 2020 Conference and ACNP 2020 Conference allowances (limited – more details upon acceptance)
• Please note that the CDLP program does not provide a travel allowance.

Award Eligibility
• ADAA membership (applicants must be an ADAA member in order to apply)
• Become an active leader within ADAA, including but not limited to joining a Special Interest Group, starting a Special Interest Group, developing a professional/public webinar, writing a professional/public blog, or serving on a Committee
• Graduate degree student (MD, MPH, MS/MSW, NP, PhD, PsyD), intern, resident, or postdoctoral fellow
• Early career researchers and clinicians who have completed their training within the last five years. The program welcomes applications from:
  • Masters in Counseling, Masters in Social Work, Marriage and Family Therapists, Trainees/Graduates in Clinical Psychology, Counseling Psychologists, School Psychologists, Neuropsychologists
• ADAA strongly encourages interdisciplinary and multicultural applicants
• Participants are required to attend all scheduled program events and attend the conference

Application Deadline: October 1, 2019
Donald F. Klein Award

Award Components

- Complimentary registration to the 2020 ADAA Annual Conference ($600 value)
- Recognition at the Opening Session
- $500 award
- Rapid publication in *Depression and Anxiety*
- Assignment of a mentor from the ADAA Scientific Council
- Invitation to participate in the 2021 award selection committee and get involved in other activities of the organization
- Featured profile on the ADAA website

Award Eligibility

- The award is restricted to investigators who have completed their terminal degree and are currently at a rank of assistant professor or below.
- Individuals who are working to complete their degree are not eligible.
- Applicants must be the first or senior author on the submitted paper, which must be original research on anxiety disorders, depression, and comorbid related disorders, focusing on neurobiology, psychosocial treatments, or experimental psychopathology.
- The paper cannot be submitted or under review anywhere else from submission until notification about the award (including ADAA's *Depression and Anxiety* Journal).
- ADAA Board Members and the ADAA Scientific Council members are not eligible.
- Applicants must be members of ADAA, but we welcome new members, so interested nonmembers should feel free to join and then submit.

Application Deadline: October 1, 2019
Submission Deadlines

**July 10, 2019**: Master Clinician Sessions
➢ Acceptance Notifications: August, 2019

**September 5, 2019**: Symposia, Workshops, Roundtables
➢ Acceptance Notifications: October, 2019

**October 1, 2019**: Career Development Leadership Program, Donald F. Klein Award, and CDLP Mentor Applications
➢ Acceptance Notifications: November, 2019

**October 30, 2019**: New Research Posters
➢ Acceptance Notifications: December, 2019
